Teneo Mobile - Making mobile technology think

Teneo Mobile is a platform independent technology designed to enable companies, organizations, manufacturers and developers to create their own virtual assistant as a mobile app, regardless of platform, mobile device and even language.

“

Harness the proven power of Natural Language Interaction (NLI) technology to make your mobile app, software program or device think, reason and converse in an intelligent, humanlike manner

By using everyday, natural language - either spoken or typed - users are able to interact with their smartphone or tablet using intelligent, humanlike conversations with a mobile virtual assistant who answers queries and requests in a user-friendly, conversational style.

With deep integration into on-board features such as calendar and email, plus the ability to access content from external applications and other information sources, Teneo Mobile delivers an intuitive experience for users.

Teneo Mobile is driven by Artificial Solutions' sophisticated Natural Language Interaction engine that allows virtual assistants to be built in 21 different languages, including complex character sets such as Mandarin and Russian.

The Teneo Natural Language Interaction Engine is the 'brains' behind Teneo Mobile

One application - different needs

Teneo Mobile offers advantages right across the mobile ecosystem.

For device manufacturers, software and OS providers

Teneo Mobile offers a platform independent alternative to Apple's Siri technology, delivering intelligent, interactive virtual assistants optimized for mobile devices.

For companies

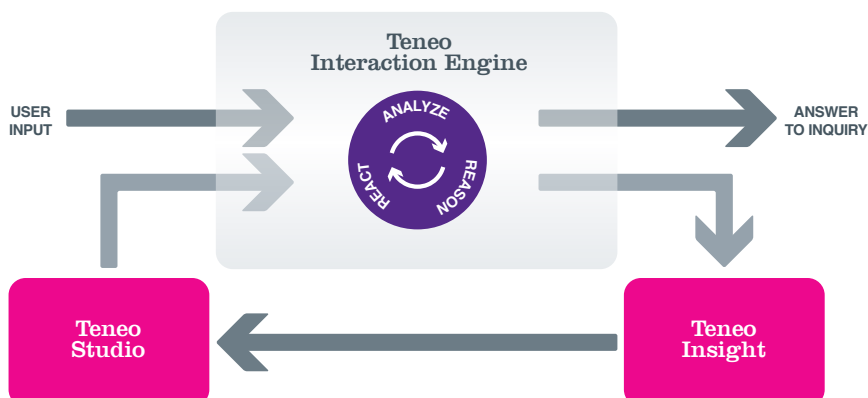

Teneo Mobile offers an innovative way to reinforce your brand using mobile computing. You can stay in touch with your customers, whenever and wherever is right for them. With Teneo Mobile, you can have a speech-enabled, intelligent virtual assistant as your brand ambassador, permanently available on mobile devices.

For consumers

Teneo Mobile offers all the advantages of an online virtual assistant on your smartphone or tablet, delivering a new way of communicating with these mobile devices in an intuitive, friendly manner.

For developers

The power of Teneo's NLI capability has been harnessed in Teneo Toolkit, a software developer toolkit (SDK) that includes a dedicated set of applications for developers. It allows you to enrich your apps by providing a powerful natural language capability to answer questions, retrieve information or access resources, perform e-commerce transactions and much more - effortlessly, efficiently and very cost-effectively.

Benefits

Easy integration. Teneo Mobile comes with built-in integration to common mobile device features. The open API and extensive SDK allow Teneo Mobile to be more closely integrated with specific features on individual devices.

Extended functionality. Whilst Teneo Mobile has been optimized for mobile computing applications, the same functionality could be extended for use in other electronic devices and even white goods, such as TVs, where a spoken command to, for example, record a program, control other TV features or even provide an extended interface with other devices such as smartphones.

App connectivity. Teneo Mobile can link to external apps, accessing content and using it as part of a response to a query. So if you ask “what’s the weather forecast for tomorrow?” Teneo Mobile will know what day ‘tomorrow’ is and will access a relevant weather channel to find the answer. Likewise, ask Teneo Mobile to play your favorite song, and it could access Spotify and start to play the song for you.

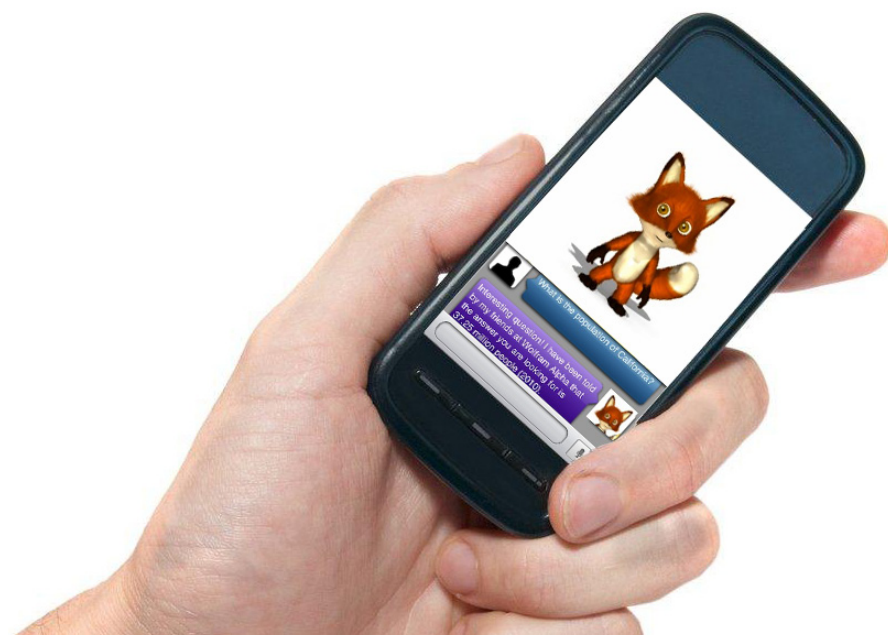

Animated avatars and built-in intelligence. Teneo Mobile offers complete flexibility. If an animated personal assistant, displayed as an avatar, meets a company’s brand guidelines, we can deliver. If one prefers the interface to be less visual this is no problem either. At the end of the day,

it is the Natural Language Interaction engine that is the brain, delivering intelligence.

Multiple languages. Teneo Mobile currently supports 21 languages, including Mandarin and Russian, offering a global solution.

Improved customer service. Teneo Mobile offers an innovative and effective way to communicate with customers, providing 24/7 service in an automated, yet approachable, way.

Increased Business Value. By combining Teneo Mobile with Teneo Insight, you can gain unprecedented insight and understanding into what customers are thinking.

A Teneo Mobile Virtual Assistant is intelligent and friendly

About Artificial Solutions

Artificial Solutions is the leading specialist in Natural Language Interaction (NLI). The company's patented technology enables people to hold two-way meaningful conversations with applications and services running on computers, mobile technology and other electronic devices in a humanlike, intelligent manner.

Typically deployed as web-based Virtual Assistants for customer service and sales, and as embedded speech-enabled applications for mobile computing, Artificial Solutions enables organizations to increase customer satisfaction and direct revenues, whilst reducing costs. Platform and device independent, Artificial Solutions' NLI technology is available in 21 languages and includes powerful analytics that deliver valuable insight into customers' needs and behavior.

With development centers in Barcelona, Hamburg, London and Stockholm and offices across Europe, Asia-Pacific and South America, Artificial Solutions' technology is deployed by hundreds of public and private sector organizations and used by millions of people every year.
